

Jake Pauls, CPE, is President of Jake Pauls Consulting Services. He has 35 years of experience in research, codes/standards development, public health advocacy and consulting, and 20 years of experience at the National Research Council of Canada. He currently serves on several national committees in the USA involved with standards and model codes for building design. He represents the American Public Health Association for eight committees. Educated in architecture and certified in ergonomics, he is well known for bridging among ergonomics, public health and development of codes and standards for building use and safety. A focus for much of this work is stairway safety and usability, including stairway use in major evacuations such as with the World Trade Center for which he co-directs an international initiative on evacuation research and serves on the Professional Advisory Panel for the Skyscraper Safety Campaign.
